

FEATURES

- ▶ Build To Your Specification
- ▶ Video, Audio, Data & Ethernet Fiber Transport
- ▶ Choose the Signals You Need, Unit Built to Order
- ▶ Rugged 10, 6, 4 and 2 Card Boxes
- ▶ Chassis Available in Standard Black or New White finishes for Corporate, Medical, Scientific or Educational Environments

APPLICATIONS

- ▶ PTZ/POV Camera Control
- ▶ OB and Studio Links
- ▶ Intercom Extensions
- ▶ Long Distance Video, Audio, Data Transport

Provides Solutions For Any Combination of Signal Transport Over Fiber

VERSA|BRIX

The VersaBrix Series from MultiDyne provides a versatile solution for your enterprise A/V and broadcast fiber transport requirements. Utilizing up to 18 CWDM wavelengths you can transmit and receive all signals over one single mode fiber. Alternatively, each card's I/O can be sent or received over its own disparate fiber.

Mix and match signal formats ranging from RS232/422 data, analog audio, and digital video up to 12G-SDI and even 10 Gb Ethernet in the same unit. With the VX (10 card slot), V6 (6 card slot), V4 (4 card slot), VT (2 card slot) enclosures, a unit can be created to your exact specifications. The possibilities are endless by using the [intuitive web-based configurator tool](#).

Signal presence is displayed on the front panel with LED indicators. A link LED indicates the VB has established an optical link to another VB box while the front panel power meter indicates receiver sensitivity from -21 to 0 dBm.

The standard VB box comes complete with 12 VDC power supply and an option for redundancy is available. Other power options include a battery plate and remote power can be achieved over SMPTE hybrid fiber optic cable using our external JUICE or APE power supplies.

While portable in nature for field applications, mounting options for the VB Series include 1 RU Rackmount Kits, PTZ Kits to be mounted directly to your camera and wall mounting brackets.

Many VB configurations are compatible with an openGear card with similar I/O. This allows for VB's in the field transporting signals back to a centralized industry standard 2 RU frame with redundant power and DashBoard monitoring.
